AND CULTURAL ASSETS**

## DiadES

Assessing and enhancing ecosystem services provided by diadromous fish in a climate change context

ERDF funding 1,660,834.53 M€

Total budget 2,214,446.04 M€

February 2019 | January 2022

[www.diades.eu](http://www.diades.eu)

Diadromous fish (shads, lampreys, eel, salmon, mullet...) provide numerous ecosystem services to local communities while migrating between fresh and marine waters.

**DiadES** will assess and contribute to the enhancement of these services by considering climate change impacts on the geographical distribution of these fish in the western Atlantic and creating a transnational platform of innovative management measures of these species.

Project funded by the Interreg Atlantic Area Programme through the European Regional Development Fund
